

ICEYE Flood

Iceye's satellite constellation provides access to timely and reliable radar imagery, day and night, in any weather. Synthetic aperture radar (SAR) sensors capture depth and perimeter information daily as flood events unfold, providing valuable insights that help solve for claims, damage assessment, and extent of affected area use cases.

Coverage area & data available

- Global flood depth & extent

Update frequency

Event data is updated daily during an event.

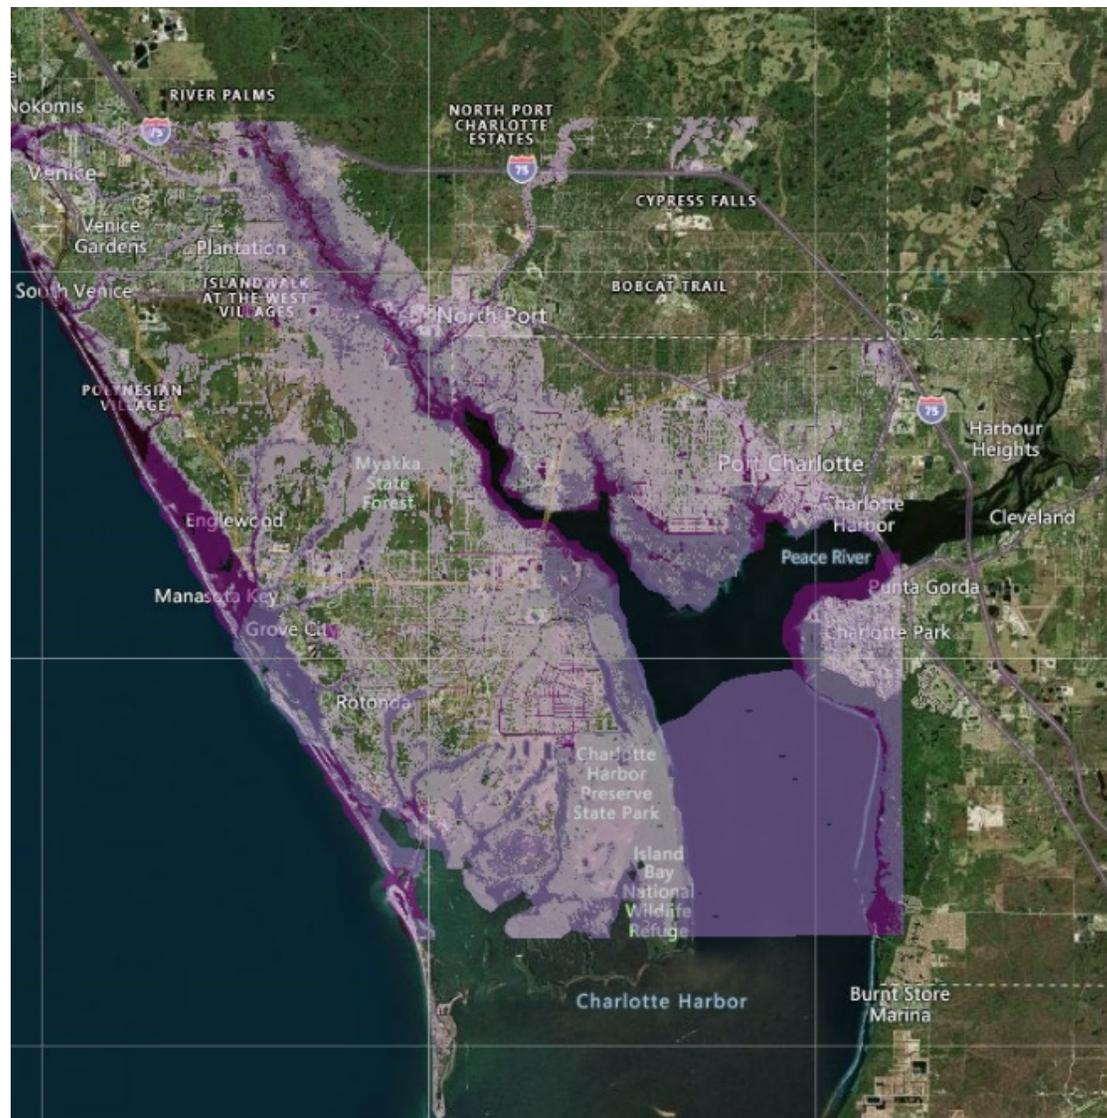

Columns

We enhance your data with columns you can filter by & export:

Inland Flood (ICEYE)[Date/Time]

What the data means

The various types of flood data use observed data to provide bands from <1 meter to 3+ meters for significant events
