

Hurricane Event Impact

The Event Impact model from Insurity Geospatial automates the communication of active hurricanes directly to your underwriting teams, enabling them to avoid writing new risk that are currently in or near the path of a damaging event.

Just enter your prospective risks and we'll automatically check those locations against current forecasts to let your Underwriting team know immediately if there is a potential impact.

Our solution uses hurricane data from NOAA to provide a timely and accurate impact assessment.

Coverage Area

- United States

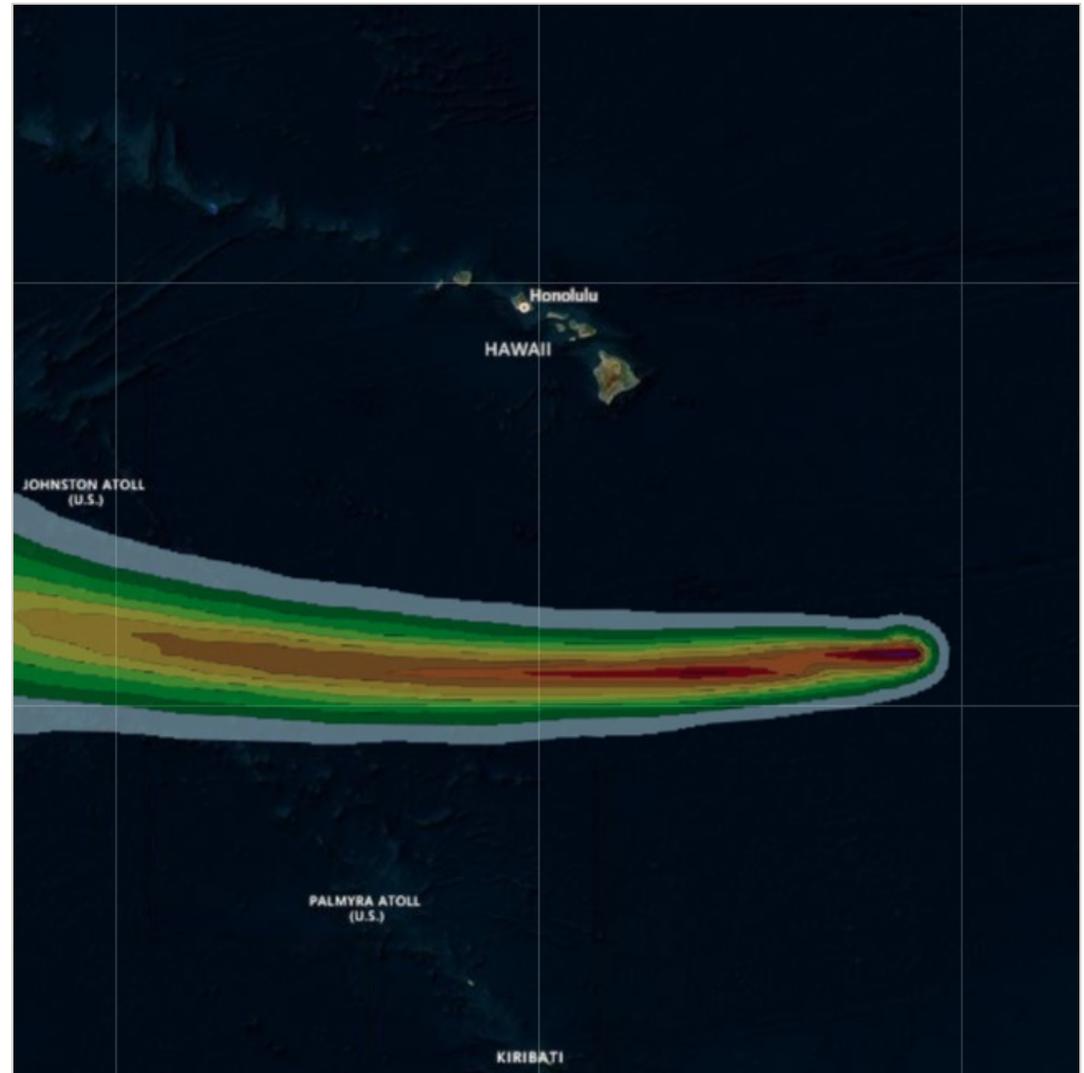

Report Details

We enhance your data with attributes you can view, filter by and export:

- Overall Rank
- Distance to 5-day Perimeter
- Probability of Hurricane Force Winds
- NOAA Forecast Date

Overall Rank Categories

- Within Perimeter
- < 100 Miles
- Not Impacted
