

## Flood

The National Flood Hazard Layer (NFHL) is a geospatial database that contains current effective flood hazard data. FEMA provides the flood hazard data to support the National Flood Insurance Program.

The NFHL is made from effective flood maps and Letters of Map Change (LOMC) delivered to communities. NFHL digital data covers over 90 percent of the U.S. population.

### Coverage Area

- United States

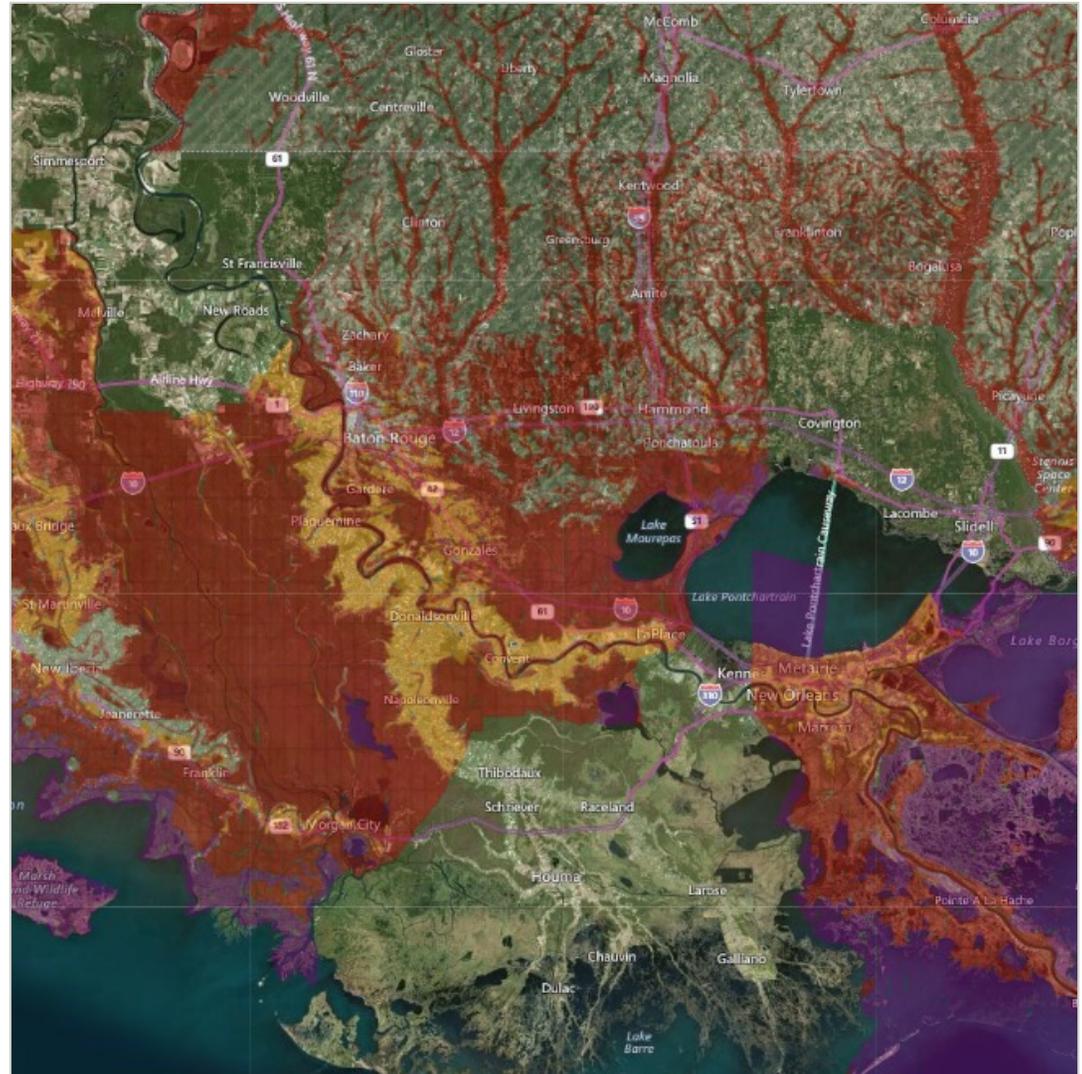

### Report Details

We enhance your data with attributes you can view, filter by and export:

- Overall Rank
- Zone/Sub-Zone

### Overall Rank Categories

- A Zones
- V Zones
- X 500
- X
- D Undetermined
